

## Recycling

PRC ideology is reflected in our desire to keep products out of the nation's overflowing waste stream. To do this, we recycle hundreds of thousands of products each year. One might even say that remanufacturing is the ultimate method of recycling.

The disposal of electronic waste, especially computers, has become an increasing burden on today's businesses. PRC has established a collection center for electronic recyclables. We will collect your e-waste and provide destruction and data erasure services, in addition to safely de-manufacturing your products and recycling raw materials.

We recycle Electronic Waste!

- Divert materials from our landfills
- Conserve natural resources
- Reduce pollution
- Reuse of materials provides social benefits

We have partnered with AER Worldwide in order to provide a place for companies to safely and conveniently dispose of their computers, televisions, MP3 players, cell phones, VCR's, CD & DVD players, etc.

The disposal of electronic waste has become an increasing burden on today's businesses. PRC has established a Community Collection Center for electronic recyclables.

We make it our priority to recycle as many component parts as possible from each product that we receive during our remanufacturing process.

However, due to chronic field failures, prohibitive cost, or obsolescence, some clients choose not to remanufacture certain models. If and when PRC receives such a model, we will recycle the raw materials. In addition to keeping tons of materials out of our Nation's overflowing landfills, our recycling programs minimize (sometimes eliminate) our partner's disposal costs.
